Seeking a 6-month internship from February 2027

PROFILE

Health data science student (MSc, Université Paris-Saclay) combining biostatistics and machine learning. Experienced in analysing real-world patient data (survival analysis, GLMs, 1,620-patient cohort at Inserm) and in building data and AI tools end to end (LLM pipelines, computer vision, full-stack products). Seeking a 6-month internship in health data science, R&D or real-world evidence from February 2027.

EDUCATION

MSc Public Health – Health Data Science track (M2) · *Université Paris-Saclay* 2026 – 2027
Coursework: survival analysis and predictive modelling, machine learning, causal inference (DAGs, IPW, target trial emulation), pharmacoepidemiology, statistical genetics (GWAS, Mendelian randomization)

MSc Public Health (M1) · *Université Paris-Saclay* 2025 – 2026
Coursework: biostatistics and modelling in R, epidemiology, clinical research, health economics, French National Health Data System (SNDS)

Bachelor's degree in Economics · *Université Paris 1 Panthéon-Sorbonne* 2022 – 2025
Coursework: econometrics, statistics, mathematics

Web Developer programme · *OpenClassrooms* 2022 – 2024

EXPERIENCE

Biostatistics Intern – Real-World Data in Neurology Mar – Aug 2026
CRESS (Inserm UMR 1153), Hôtel-Dieu Hospital, Paris

- Analysed real-world data from a cohort of 1,620 neurological patients (stroke, Parkinson's disease, multiple sclerosis, neuromuscular disorders)
- Modelled adherence to prescribed exercise programmes with survival analysis (Kaplan–Meier, Cox models)
- Built multivariable GLMs (Gamma, log link) across three adherence definitions, including a two-part model for the 80% compliance threshold
- Classified patients from ICD-11 codes and unstructured free text; analysed patient-reported outcomes with non-parametric tests
- Automated analysis and reporting pipelines in R (ggplot2, openxlsx)

Junior Data Scientist (Intern) Apr – Sep 2025
Aryam Adaptive & Regenerative Solutions, Paris (remote)

- Automated the extraction, cleaning and storage of agroecological data, with vector embeddings for semantic search
- Developed a multi-agent RAG chatbot (LangChain, LangGraph) deployed on Microsoft Azure for farmers and agronomists
- Implemented a computer vision module for plant classification

Junior Data Engineer (Intern) Jun – Sep 2024
Forvis Mazars, Paris

- Built a Python solution (pandas, French government open-data API) to clean and standardise customer address data for an insurance client
- Processed Copernicus Sentinel-2 satellite imagery (Google Earth Engine, Folium) to monitor agricultural land regeneration

PROJECTS

SlideAI – AI-powered B2B SaaS (founder, side project) Nov 2025 – Sep 2026

- Designed, built and launched an AI presentation generator end to end (Next.js, TypeScript, Supabase, Stripe)
- Reached 170 registered users and first organic sales within a month of launch

Geo-epidemiological dashboard (personal project)

- Web application linking environmental (PM2.5) and public health (asthma) data, with correlation analysis in Python and interactive maps (React, TypeScript, Leaflet)

SKILLS

Statistics	Survival analysis (Kaplan–Meier, Cox), generalized linear models, two-part models, non-parametric tests, multivariable regression
Machine learning & AI	Machine learning, computer vision, LLMs and RAG (LangChain, LangGraph), vector databases (Pinecone)
Health data	Real-world data, ICD-11 coding, patient-reported outcomes, SNDS, GDPR
Programming	R (ggplot2), Python (pandas, NumPy), SQL
Tools & cloud	Git, Docker, Linux, Microsoft Azure
Web development	TypeScript, JavaScript, React, Next.js, Node.js

LANGUAGES & INTERESTS

Languages	French (native) · English (B2, professional working proficiency) · Spanish (A2)
Interests	Boxing, basketball, cooking, mechanics
